## Aggregation unit

The (semi) automatic case aggregation system for serialized products automatically folds the bottom of a shipper case, prints a unique label and applies it on the corner of the shipper case.

The shipper can be loaded manually with single or bundled cartons.

A high resolution camera reads the serialized code on each carton per layer. (Pack by layer)

After the last layer has been confirmed, the shipper will be closed by an integrated tape-sealer.

This GMP-compatible machine has an ergonomic design and small footprint.

It is your solution between a full automatic case packer palletizer and a standard manual Aggregation station.

The unit can be:

- used as a manual case packer without aggregation.
- ordered without tape-sealer.
- equipped with vision equipment. Systech or Antares equipment is tested.
- equipped with corner wrap printer for labels up to 4" x 12".
- used in- or off-line.
- ordered with electric height adjustment in order to improve ergonomics.
- ordered as a mobile version, which can be used on different production lines.
- ordered with a collecting table to ease manual loading of the case.
- redesigned to meet your requirements.

Check the website or scan the QR code for pictures of many machine variants and a demonstration movie!
