## Carton turning device

The carton turning device is designed to turn cartons for aggregation purposes. The (serialization) code is printed on one side of the carton, the turning device will rotate the cartons a 180 degrees so the code can be read on the opposite side. A carton turning device with a rotation of 90 degrees is available as well. This GMP-compatible machine has an ergonomic design and small footprint. We have a short delivery time and the serialization peripherals can be redesigned to meet your requirements.
