## Printer on the fly

The PRINTER ON THE FLY prints elongated data directly onto the upper surface of a carton in the production line. The unit is developed for printing barcodes on small cartons for any data. The cartons move at a constant speed on your production line. The inkjet head moves across the carton very fast leaving a print directly onto the carton. This principle is PATENTED by Technico..

The printer on the fly prints:

- With inkjet systems and cartridges.
- Up to 240 prints per minute.
- Print quality Grade B
- Print height 12.7 [mm], print length 70 [mm].
- Directly onto the surface of the carton, no storage and logistics required for the expensive labels.

Check the website or scan the QR code for pictures of many machine variants and a demonstration movie!
